

CONTENTS

INTRODUCTION	3
1. PHYSICAL BASIS OF TELEVISION	6
1.1. General information on television.....	6
1.2. Principles of television scanning.....	6
1.3. TV picture parameters	8
1.3.1. Requirements for the parameters of the television image	8
1.3.2. The eye as a receiver of visual information.....	10
1.3.3. Evaluation of the television image parameters.....	12
1.3.3.1. Scale parameters	12
1.3.3.2. Frequency parameters.....	13
1.3.3.3. Brightness settings.....	13
1.4. Structure of signal analog black and white television.....	16
1.5. Color on the TV screen.....	18
1.5.1. Perception of color by a person and the features of colored cinescopes	18
1.5.2. Structure of an analog color television signal.....	20
1.5.2.1. Luminance and chrominance signals.....	20
1.5.2.2. Full color television signal.....	21
1.6. Analog color television standards and their features.....	22
1.6.1. General characteristics of analog color television standards.....	22
1.6.2. Features of the NTSC system	23
1.6.3. Features of the <i>PAL</i> system.....	24
1.6.4. Features of the <i>SECAM</i> system.....	24
1.7. Modern television image playback devices.....	25
1.7.1. Plasma Monitors	25
1.7.2. Liquid Crystal Monitors	26
1.7.2.1. Principle of operation of liquid crystal monitors.....	26
1.7.2.2. Types of liquid crystal matrices (TN, IPS, MVA, PVA).....	29
1.7.3. Organic monitors	32
1.7.4. Features of FED monitors.....	34
1.7.5. 3D monitors and 3D glasses.....	34
1.7.6. Video projectors.....	36
1.7.6.1. LCD projectors	36
1.7.6.2. D-ILA projectors.....	37
1.7.6.3. Laser projectors.....	38
References to section 1.....	45

2. GENERAL PRINCIPLES OF DIGITAL TELEVISION	47
2.1. Special features of the submission of video signals in the digital TV	47
2.2. Converting component of video in digital form	48
2.3. Principles of encoding	51
2.3.1. Features standard MPEG-2	52
2.3.2. Particular MPEG-4 standard (H.264)	59
2.3.2.1. To the H.264 standard	60
2.3.2.2. Advantages and main disadvantages of H.264 standard	61
2.3.2.3. Support of H.264 standard	61
2.4. The principles of noise immunity channel coding signals picture and sound	62
2.4.1. Order of operations for protection of errors in transmission and reception of digital television systems	62
2.4.2. Principles scrambling	62
2.4.3. The principles of noise immunity coding	63
2.4.3.1. The external encoding using the codes of the Reed-Solomon	65
2.4.3.2. The Interleaving and deinterleaving	66
2.4.3.3. The internal correction convolutional coding	67
2.5. Modulation in systems of digital TV broadcasting	69
2.6. OFDM	76
References to section 2	80
3. SYSTEMS AND STANDARDS OF DIGITAL TELEVISION	81
3.1. General information about digital systems (terrestrial, satellite and cable television) and basic standards (ATSC, DVB, ISDN) digital television	81
3.2. Features of the ATSC standard	82
3.3. General information about the DVB standard	85
3.4. Features of the ISDB standard	87
References to section 3	89
4. STANDARDS TERRESTRIAL DIGITAL TV DVB-T AND DVB-T2	90
4.1. DVB-T standard terrestrial TV broadcasting	90
4.1.1. General characteristics of the DVB-T standard	90
4.1.2. FEATURES OF USE AND PARAMETERS OF COFDM	90
4.1.3. Methods for modulating the carrier in the baseband signal SOFDM	94
4.1.4. Special features non-hierarchical and hierarchical modulation modes	95

4.1.5. Frame structure COFDM.....	99
4.1.6. External and internal interference-channel coding.....	101
4.2. Standard DVB-T2 terrestrial TV broadcasting.....	106
4.2.1. General characteristics of the DVB-T2 standard.....	106
4.2.2. Features of transformation of digital streams to transmit and receive systems, the standard DVB-T2.....	107
4.2.2.1. Classification and structure of digital streams.....	107
4.2.2.2. Features noise proof channel coding in DVB-T2 standard.....	107
4.2.2.3. Features in COFDM DVB-T2 standard.....	108
4.2.3. DVB-T2 frame structure.....	111
4.2.4. Properties interlaces in DVB-T2 standard.....	113
4.2.5. Turn signal constellation and Q cyclic delay.....	114
4.2.6. Using the MISO.....	114
4.2.7. Reducing the peak-to-average transmit power.....	115
4.2.8. Additional functions of the standard DVB-T2.....	116
References to section 4.....	118

**5. STANDARDS OF SATELLITE DIGITAL TELEVISION DVB-S
AND DVB-S2.....**

5.1. General information about the systems and standards of satellite digital television broadcasting.....	119
5.2. Standard DVB-S.....	120
5.2.1. Features of converting digital streams in transmitting and receiving systems of the DVB-S standard.....	120
5.2.2. Methods of modulation and noise-immune coding.....	122
5.3. The DVB-S2 standard.....	125
5.3.1. General characteristics of the standard.....	125
5.3.2. Features of converting digital streams in transmitting and receiving systems of the DVB-S standard.....	125
5.3.3. Methods of modulation and noise-immune coding in the DVB-S2 standard.....	126
5.4. Distributions of polarization-frequency resources.....	134
References to section 5.....	135

6. CABLE DIGITAL TELEVISION.....

6.1. Introduction.....	137
6.2. General information about cable television systems.....	138
6.3. Structure of the digital multiservice network of cable television.....	139
6.4. Basic requirements for systems and structure of cable TV systems.....	142
6.5. Header cable TV station.....	147

6.6. DVB-C standard digital cable television system.....	149
6.6.1. Construction principles of the headed station digital cable television system DVB-C standard.....	149
6.6.2. Features of receivers-decoders of DVB-C digital cable television subscribers.....	151
6.6.3. The main winnings of cable operators when implementing the DVB-C standard	152
6.7. General characteristics of DVB-C2.....	153
6.8. Concept of PLP.....	154
6.9. Decomposing on QAM symbols and jamming coding	155
6.10. Using OFDM in DVB-C2	156
6.10.1. Main difference between DVB-C2 and DVB-C.....	156
6.10.2. DVB-C2 Operating Characteristics	158
6.10.3. Improving spectrum efficiency in the DVB-C2 standard	159
6.10.4. Reducing the level of interference from cable networks in the DVB-C2 standard	161
6.11. Features of interactive cable networks	162
6.16. Cable networks of collective reception of television signals	164
References to section 6.....	167
7. DIGITAL TELEVISION USING IP (IPTV)	168
7.1. General Information on IP Television	168
7.1.1. Definition of IPTV and its main characteristics.....	168
7.1.2. Architecture, basic concepts, typical IPTV network structures and services.....	169
7.2. Basic options for transmitting video signals to IPTV	174
7.3. Basic IPTV services	175
7.4. IPTV Core Quality Parameters and Requirements.....	179
7.5. Multicast Services for IP Triple-Play Networks.....	182
7.6. IPTV in IP NGN platform	201
Control questions to Section 7.....	214
References to Section 7	215
8. MOBILE DIGITAL TELEVISION SYSTEMS	216
8.1. General characteristics of mobile digital television systems.....	216
8.2. Mobile TV standard DVB-H	217
8.2.1. Specifications and levels of the DVB-H standard	217
8.2.2. Principles of building DVB-H mobile television systems.....	218
8.2.3. Overview of DVB-H circuit solutions of different manufacturers	220

8.3. Features of mobile television standards MBMS, DAB, DMB, ISDB and MediaFlo	223
8.3.1. The DAB standard	223
8.3.2. The DMB standard.....	224
8.3.3. ISDB-T Standard	224
8.3.4. MBMS Multimedia Broadcasting Service.....	224
8.3.5. MediaFlo Standard.....	225
8.4. Methods of integration of mobile television systems and technologies for access to digital television content.....	226
8.4.1. Structure of the organization of an integrated digital terrestrial broadcasting network	226
8.4.2. Features of the integrated mobile TV network standard DVB-H.....	227
8.4.3. Mobile TV services using 3-4G infrastructure	233
8.4.4. Integration of the DVB-H system and modern technologies for accessing digital TV content	253
8.5. Parameters of efficiency and quality of mobile TV technology in mobile communication networks of the UMTS standard.....	254
8.5.1. Features of MBMS broadcasting technology in mobile communication networks.....	254
8.5.2. Quantitative estimation of energy and speed characteristics of the UMTS air interface.....	260
8.5.3. Quantitative estimation of energy and speed characteristics of the HSDPA air interface	264
8.6. Vehicular ad hoc networks (VANETs) for IPTV services	265
8.7. Prospects for the development of mobile television	283
8.7.1. Broadband data transmission systems in mobile television technologies	283
8.7.2. Using the WiMAX network as a promising mobile TV transmission medium.....	287
8.7.3. The outlook for mobile LTE	288
8.8. Future IMS Service Platform for Creating Value Added TV Services.....	299
8.9. Mobile TV in the Internet of Things	301
References to section 8.....	308
9. CONTENT DELIVERY OVER THE INTERNET	313
9.1. Content distribution in closed systems	313
9.2. General information on IPTV and Internet-Television	314
9.3. OTT (Over-The-Top) Peer-to-Peer Client Server	319
9.3.1. General information on OTT	319

9.3.2. The prospect of creating a unified architecture for Over-the-Top Television (OTT-TV) and Internet Protocol Television (IPTV)	320
9.3.3. Specifics of Video content distribution	321
9.3.4. Assumptions about architecture unifying	323
9.4. Content Delivery Networks (CDN).....	325
9.5. File-sharing peer-to-peer networks	328
9.5.1. General information on peer-to-peer file-sharing networks	329
9.5.2. Definitions and properties of P2P systems	330
9.5.3. Rules of file-sharing in peer-to-peer networks	332
9.6. Types of file-sharing networks organization	333
9.6.1. Centralized networks	333
9.6.2. Decentralized networks	334
9.6.3. Partially decentralized (hybrid) networks.....	335
9.6.4. Specifics of decentralized technologies	335
9.6.5. Security of P2P networks	336
9.6.6. Construction of P2P networks	337
9.6.7. Application area of P2P file-sharing networks	339
9.7. Process of searching for resources in peer-to-peer	342
9.7.1. Napster – centralized file-sharing system	342
9.7.2. Deployed decentralized system: Gnutella	343
9.7.3. Hybrid system: FastTrack/Kazaa.....	345
9.7.4. BitTorrent.....	346
9.8. Comparative characteristics of search processes in unstructured and structured P2P networks.....	347
9.8.1. Comparison and discussion of file searching methods	347
References to Section 9	350

10. ANALYSIS OF PEER-TO-PEER P2PTV

NETWORKS ARCHITECTURE	352
10.1. Composition and basic functions of P2P network.....	352
10.1.1. General information on architecture of P2P networks.....	352
10.1.2. Order of elements interaction in P2P network.....	353
10.2. Architecture of cluster-based structured system.....	356
10.3. Generalized architecture of P2P network software	358
10.3.1. Scheduler module	359
10.3.2. Overlay module	360
10.3.3. Control module	360
10.3.4. Message exchange level	360
10.4. Methods of forming and sequence of fragments.....	361
10.5. Structure and topology of overlay	363

10.6. Structure of media data.....	364
10.6.1. Fragment-based system	364
10.6.2. Band-based systems.....	365
References to Sections 10.....	367
11. MATHEMATICAL MODELS OF PEER-TO-PEER NETWORKS	369
11.1. Mathematical model of P2PTV network	369
11.1.1. Structure of algorithm for controlling peer-to-peer networks.....	369
11.1.2. Mathematical model of P2PTV network dynamics	370
11.1.3. Analysis of peer-to-peer network dynamics	372
11.2. Analysis of methods for scheduling information chunks for streaming peer-to-peer video.....	376
11.2.1. Models for scheduling streaming video.....	376
11.2.3. Analysis of video quality considering specifics of video content scheduling.....	378
11.3. Analysis of content state on nodes of P2P network.....	382
11.4. Optimization of process of selecting downloading files in peer-to-peer networks	385
11.5. Optimization of total weighted service time in peer-to-peer network.....	386
11.5.1. Problem statement.....	387
11.5.2. The formulation of task of minimizing total weighted service time	388
References to Sections 11	399
